SUMMARY

Systems Analysis and Development student and data & development intern at Uono Sanchez, where I build and maintain production Python pipelines and automations that extract data from web systems and PDFs, then clean, validate and load it into PostgreSQL. Before that, at COHAB SP, I analyzed and processed large volumes of housing credit data. I use SQL, Docker, Git and agentic AI (Claude Code) daily, always critically reviewing generated code, and I treat data quality as a requirement: nothing is written without validation. I'm growing toward data engineering and cloud (AWS).

WORK EXPERIENCE

Data & Development Intern – Uono Sanchez Aug 2026 – present

- Appraisal pipelines for three banks: API downloads, PDF extraction and loading into PostgreSQL with Docker.
- Data quality: batches validated before writing and accuracy measured on 500 reports (~20 fields checked).
- Automated Banco Inter's monthly billing: reading PDF appraisal reports and validating them against the price table.
- Geocoding of addresses without coordinates (~180 m typical error) and an idempotent Playwright registration bot.

Data Analysis & Processing Intern – COHAB SP Jan 2025 – Feb 2026

- Analyzed and processed large volumes of housing credit data.
- Automated recurring tasks with advanced Excel, macros and VBA.

PROJECTS

Property appraisal pipeline – anonymized version github.com/rafaelbertochi1/pipeline-laudos-banco-b

- Downloads reports, extracts PDF data and photos and loads them into PostgreSQL (Docker); accuracy checked on 500 reports.

Real estate data pipeline – thesis github.com/rafaelbertochi1/Web_Scraper_TCC

- Layered architecture (collection → ETL → relational database → analysis), with decisions in ADRs, respecting privacy law (LGPD) and robots.txt. Stack: Python, Playwright, SQLAlchemy, PostgreSQL and pytest.

Inspection registration bot – anonymized version github.com/rafaelbertochi1/robo-cadastro-banco-a

- Python and Playwright: moves inspection statuses from a portal into the management system, without duplicates.

Database Lab – Fatec (group project) github.com/rafaelbertochi1/Lab_Banco_Dados

- Relational modeling, DDL scripts, views, period-based DML loads and strategic SQL queries, with a documented data dictionary and relational model.

TECHNICAL SKILLS

- **Data & ETL:** PDF data extraction (pdfplumber, PyMuPDF), ETL in Python, data validation and quality, geocoding, advanced Excel (VBA), Power BI.
- **Databases:** SQL (intermediate), PostgreSQL, relational modeling, Oracle/PL-SQL.
- **Languages:** Python (intermediate), Java/OOP (intermediate), C++ (intermediate), HTML/CSS (basic).
- **Automation & integration:** web automation with Playwright, REST APIs and HTTP, system integration.
- **Tools & infrastructure:** Git/GitHub, Docker, AWS basics, Python virtual environments, log analysis.
- **Agentic AI:** Claude Code in daily development, with critical review of generated output.

EDUCATION

Associate Degree in Systems Analysis and Development Aug 2024 – Dec 2027 (expected)

Fatec Mogi das Cruzes (São Paulo State Technology College)

COURSES & CERTIFICATIONS

- Java Back-end with Spring AI (NTT DATA) • Java Immersive Course (Rocketseat) • Python Course (Santander Open Academy)
- Databases for Developers: Foundations (Oracle) • Power BI Fundamentals (Santander Open Academy)
- Hardware Lab (Cisco) • Network Security (Cisco) • Marketing Technician (ETEC Martin Luther King)

LANGUAGES

Portuguese: native | **English:** advanced – B2 (TOEIC)
